

Trading Bot Skills

The Claude Code Plugin That Thinks Like
a Battle-Scarred Systems Engineer.

Incident Report & Architecture Blueprint [CLASSIFIED]

Born from Blood: The Emabot Autopsy

Emabot failed 27 different ways in production. This plugin wasn't theorized; its entire DNA was extracted from these exact catastrophic failures.

ANATOMY OF A CRASH

Meet Your Battle-Scarred Co-Pilot

1 Zero Configuration: Install one plugin. It instantly maps all 27 failure modes.

Developer Code

```
import pandas as pd
_____

class TradingBot:
    _____
    def execute_trade(self):
        if signal == 'BUY':
            order = broker.buy(symbol, qty)
            _____
            Σ = _____
            _____
```

The Co-Pilot Shield

3 Context-Aware: 53 automated skills trigger precisely when needed.

Live Markets

2 Hard Gates: Enforces architectural safety before a single order is routed.

The Difference Between Suggestions and Hard Gates

in Space Grotesk Graphite Black

Naive Development

Warning Amber, Space Grotesk

Error Handling

Graphite Black Inter

`except: pass`

State Truth

Graphite Black Inter

Database P&L as truth

Missing Data

Graphite Black Inter

`VIX=99.0 Magic Sentinel`

Task Execution

Graphite Black Inter

Fire-and-forget `asyncio`

Battle-Scarred Engineering

Verified Green, Graphite Black Space Grotesk

Explicit REJECT, never None

Broker Equity as absolute truth

Explicit if value is None checks

Mandatory `done_callbacks`

The Constitution: The 28 Iron Laws of Trading

Execution Integrity

Graphite Black Space Grotesk

Law #1: FAIL-CLOSED, NEVER FAIL-OPEN.
Every error returns explicit **REJECT**.

Data & State

Graphite Black Space Grotesk

Law #24: BROKER EQUITY IS TRUTH.
Reconcile continuously.

Risk & Architecture

Graphite Black Space Grotesk

Law #2: UNIFIED DEDUP GATE.
All entry paths check one function.

Testing & Math

Graphite Black Space Grotesk

**Law #6: BACKTEST BEFORE PAPER,
PAPER BEFORE LIVE.**
Graduated gates.

* These are not linting suggestions. They are automated, impassable gates enforced by Claude.

Translating Failure into Immutable Law

The Failure

SPY entered 11 times simultaneously.

The Root Cause

Four independent engines had independent cooldowns.

The Enforced Law

Law #25: ONE position table, ONE dedup gate.

VIX=0.0 treated as missing data, triggering extreme fear.

Python's ``or`` operator treating 0.0 as falsy.

Law #20: NEVER use ``value or default`` on numeric trading data.

The Arsenal: Anatomy of 53 Automated Skills

44 Trading Domain Skills. | **9** Engineering Skills. | **1** Unified Shield.

Zero Configuration. Automatic Armor.

> Fix this ghost position bug.

....

[Auto-Triggering Skills...]

- ↳ Loading: systematic-debugging
- ↳ Loading: position-reconciliation
- ↳ Loading: trading-tdd

I see a potential ghost position. I am locking the position table to reconcile `filled\_qty` with the broker before touching local DB state. Writing the failing test first...

Architecture Pattern 1: The Fail-Closed Default

`risk-management-gates` ensure every error handler returns explicit REJECT. A passive `None` is a fatal leak.

Blast Door

Architecture Pattern 2: The Unified Dedup Tollbooth

Architecture Pattern 3: Position Reconciliation

The `position-reconciliation` skill ensures continuous syncing with `filled\_qty`. Database P&L is an approximation; Broker Equity is the law.

Architecture Pattern 4: Database Transaction Isolation

The Blueprint: The Graduated Progression Pipeline

You cannot skip steps. The `paper-to-live-progression` skill acts as an impassable gate until readiness criteria are met.

Step 1 & 2: Architecture & Mandatory TDD

No code without a failing test first. If a test passes immediately, it tests nothing.

Architecture Phase

Fira Code: `brainstorming` skill.

HALT: Describe event-driven design before writing implementation code.

TDD Phase

Law #11: The 10 Mandatory Trading TDD Categories

- ✓ Partial Fills Handling
- ✓ Race Conditions Isolation
- ✓ Fail-Closed Injection
- ✓ Slippage Detection
- ✓ Stale Data Rejection

Step 3 & 4: Data Freshness & Execution Integrity

Step 5: The Paper-to-Live Vault

The ultimate validation. The `backtesting-before-live` skill ensures walk-forward validation using identical code for both backtesting and live trading. No simulation shortcuts.

SYNTHESIS: The Invincible Execution Loop

53 skills and 28 laws working in absolute harmony. A production-ready, fail-safe trading system.

Stop Repeating the Same 27 Fatal Mistakes.

> Install Trading Bot Skills

Let the battle-scarred engineer watch your back.
